E-COMMERCE · UNICORN STARTUP · UI/UX REDESIGN

About Snapdeal

E-Commerce	2010	100M+	500K+
Industry	**Founded**	**Users**	**Sellers**
Online Retail	New Delhi, India	Registered Buyers	Partner Merchants

Snapdeal is an Indian e-commerce unicorn founded in 2010 by Kunal Bahl and Rohit Bansal. Initially a daily deals platform, it pivoted to become a full-fledged online marketplace. Despite stiff competition from Amazon and Flipkart, Snapdeal serves millions of value-conscious shoppers across India — particularly in Tier 2 and Tier 3 cities — offering products across 800+ categories.

Target Users: Budget-conscious shoppers, first-time online buyers, and semi-urban/rural consumers aged 18–40.

5 Key Usability Problems Identified

01

Cluttered Homepage & Visual Noise

The original Snapdeal homepage overwhelms users with too many banners, promotions, and product grids all competing for attention simultaneously. There is no visual hierarchy guiding the user's eye — resulting in high cognitive load and decision fatigue.

02

Outdated & Inconsistent Visual Design

Typography, color usage, button styles, and card layouts vary inconsistently across pages. The UI feels dated compared to modern e-commerce standards, reducing perceived trustworthiness and brand quality.

03

Poor Search Experience

Search results lack proper filtering, sorting, and relevance ranking. Users searching for specific products receive irrelevant or poorly organized listings with no quick-filter sidebar, making product discovery frustrating.

04

Confusing Navigation Structure

Category navigation is buried and inconsistently placed. Users cannot easily browse by category from the home screen; mega-menus are slow and overcrowded, increasing the time-to-product and dropout rates.

05

Weak Product Detail Page (PDP)

Product pages display insufficient imagery, poor image zoom, vague descriptions, and unclear CTAs. Trust signals like verified reviews, delivery estimate, and return policy are not prominently visible, reducing purchase confidence.

Design Improvements Based on UX Principles

Clear Visual Hierarchy

Applied Gestalt principles — size, contrast, and whitespace guide the user's eye from hero banner to categories to products. Reduced visual clutter significantly.

Consistent Design System

Unified color palette (Red #E8344A, Navy #1a1a2e), consistent typography, standardized button sizes, card corners, and spacing grid across all pages.

Enhanced Search & Filters

Prominent search bar with autocomplete, left-side filter panel (price, rating, brand, delivery), and relevance-sorted results with clean product cards.

Simplified Navigation

Sticky top navbar with category icon strip, clear breadcrumbs, and a redesigned mega-menu with visual category cards instead of plain text links.

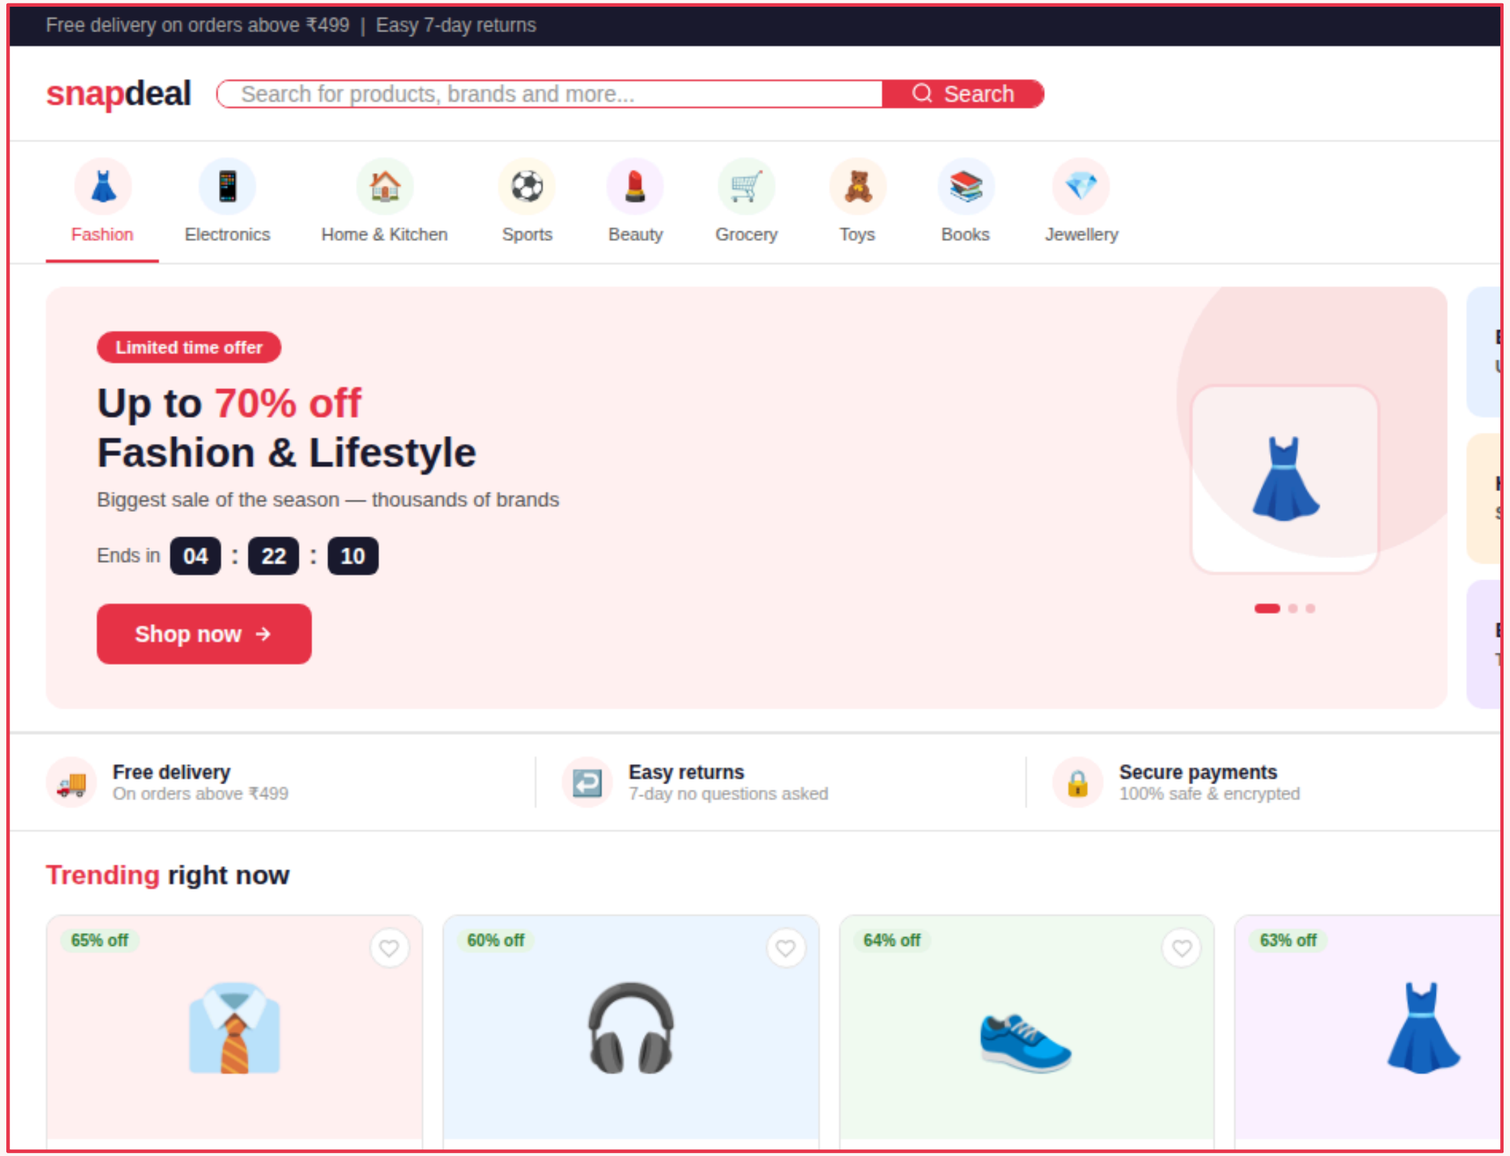
Trust-First PDP Design

Product pages now highlight delivery dates, return policy, verified reviews, and image zoom prominently. Bold CTA buttons with clear price hierarchy.

Mobile-First Approach

All screens designed responsive-first. Bottom navigation bar for mobile, touch-friendly tap targets (min 44px), and thumb-zone optimised layouts.

PROTOTYPE — HOMEPAGE

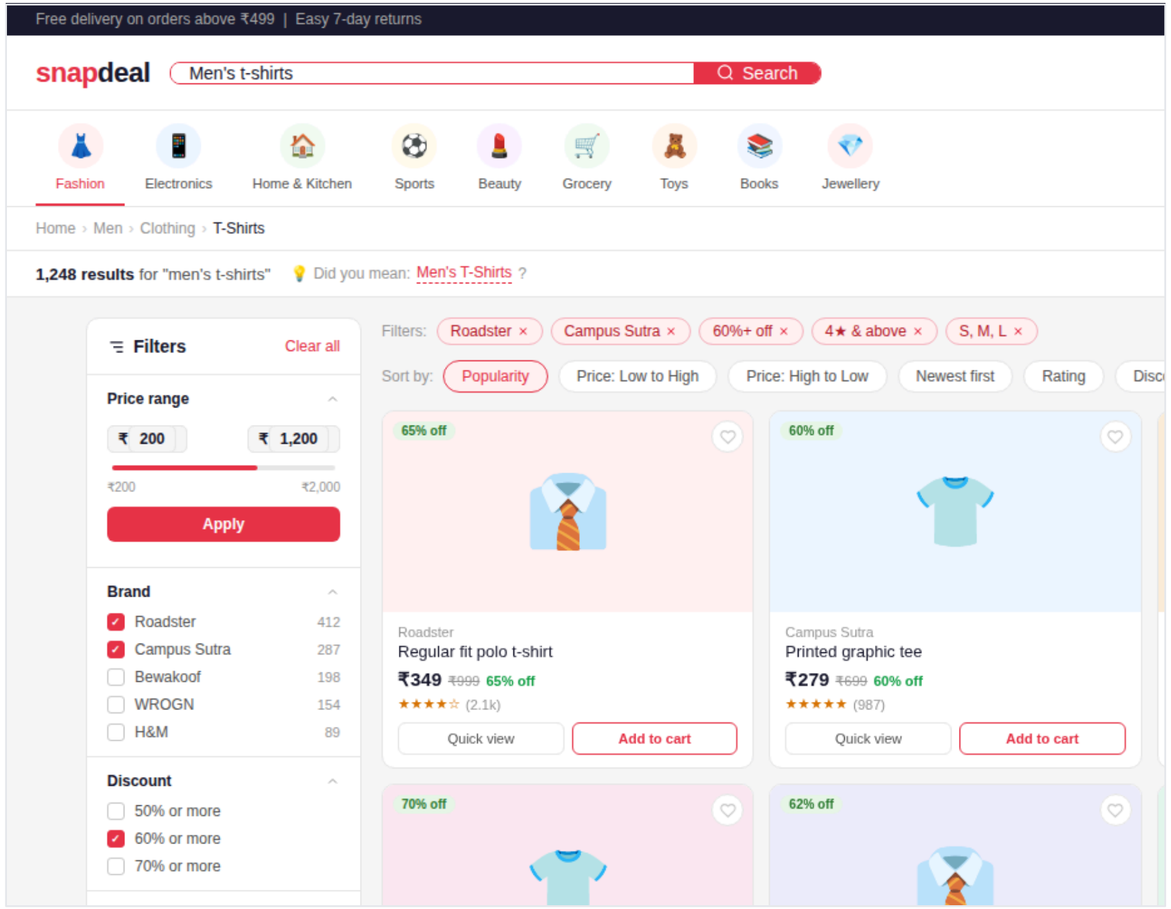


What Changed

- Clean sticky navbar with prominent search
- Category strip with emoji icons for quick scanning
- Hero banner with countdown timer for urgency
- 5-column product grid with consistent cards
- Trust bar: Free delivery, Easy returns, Secure payments
- Dark footer with quick links and app badges

PROTOTYPE — SEARCH & PRODUCT DETAIL

Search & Listing Page



Filter sidebar · Sort bar · Product grid

Product Detail Page (PDP)

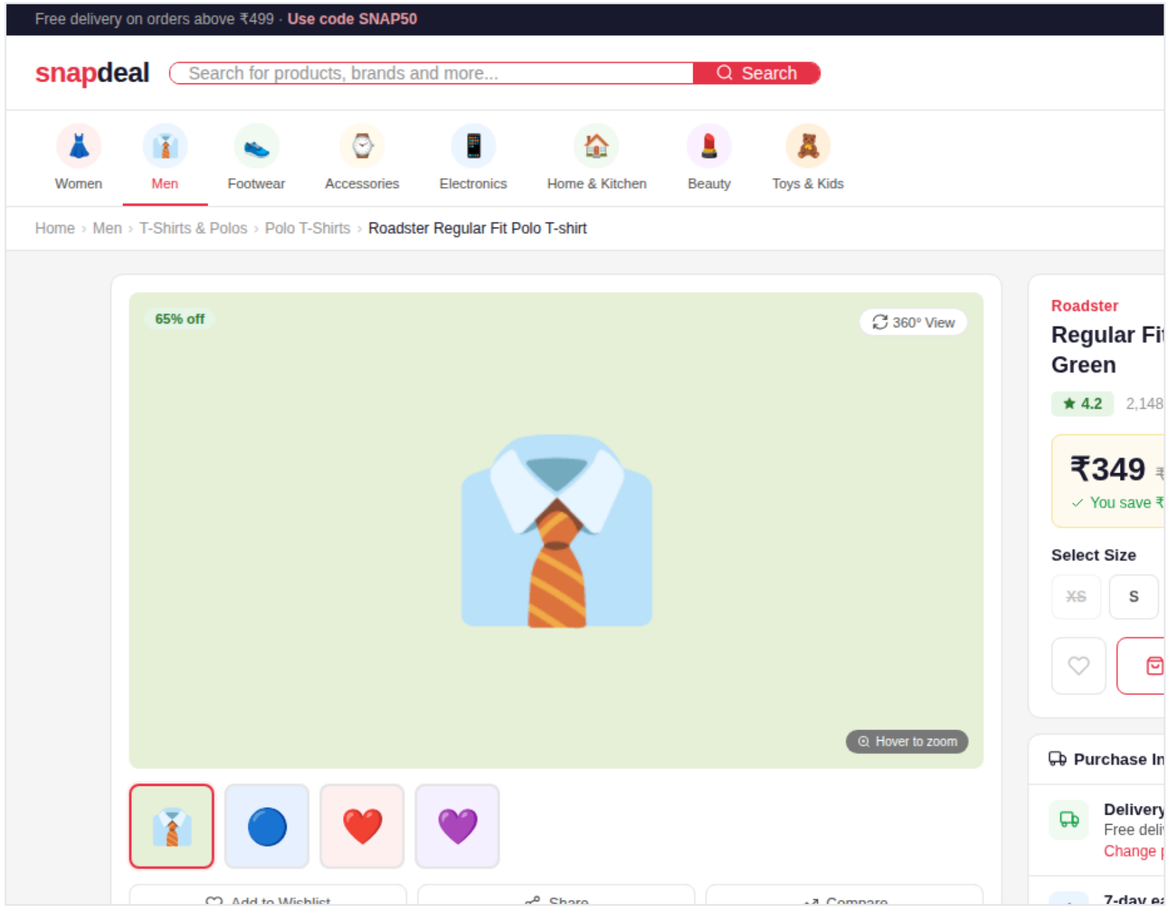


Image gallery · Price · Trust signals · CTA

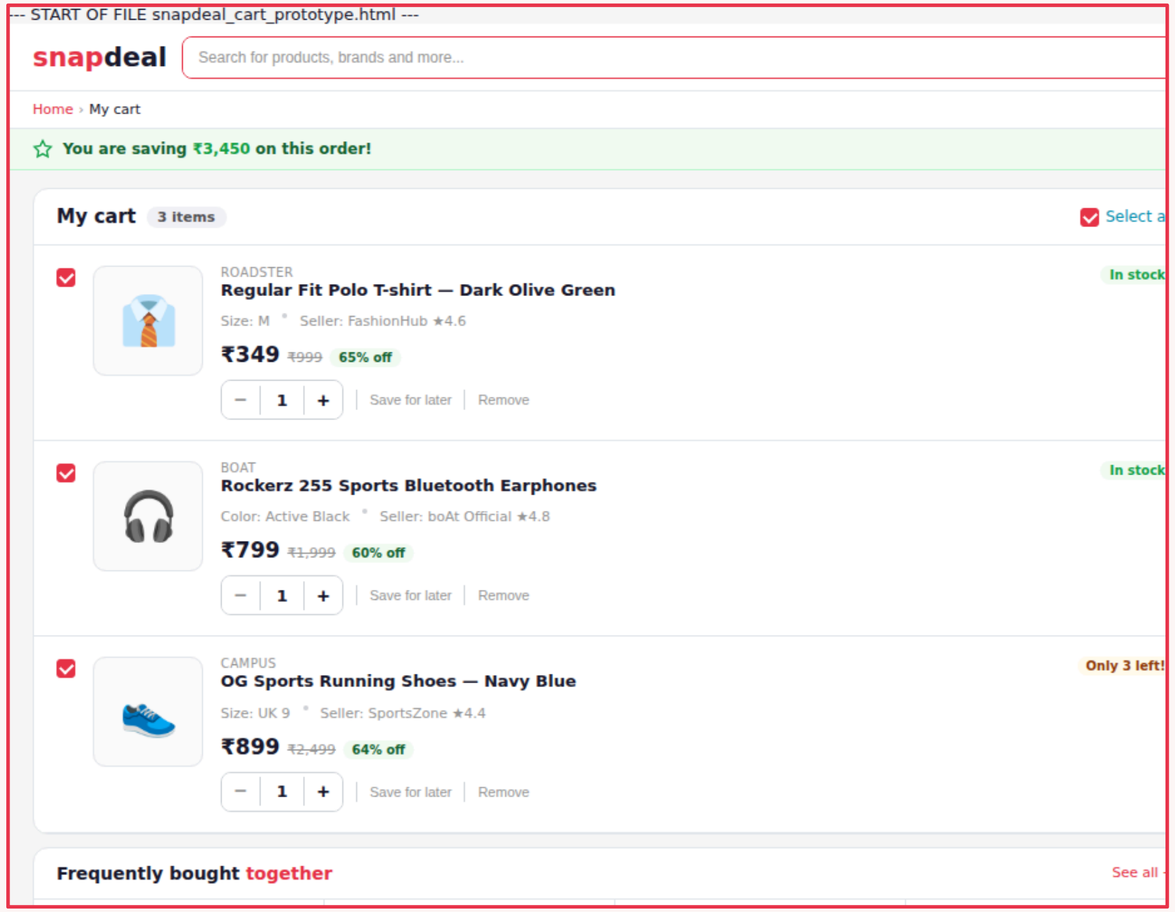
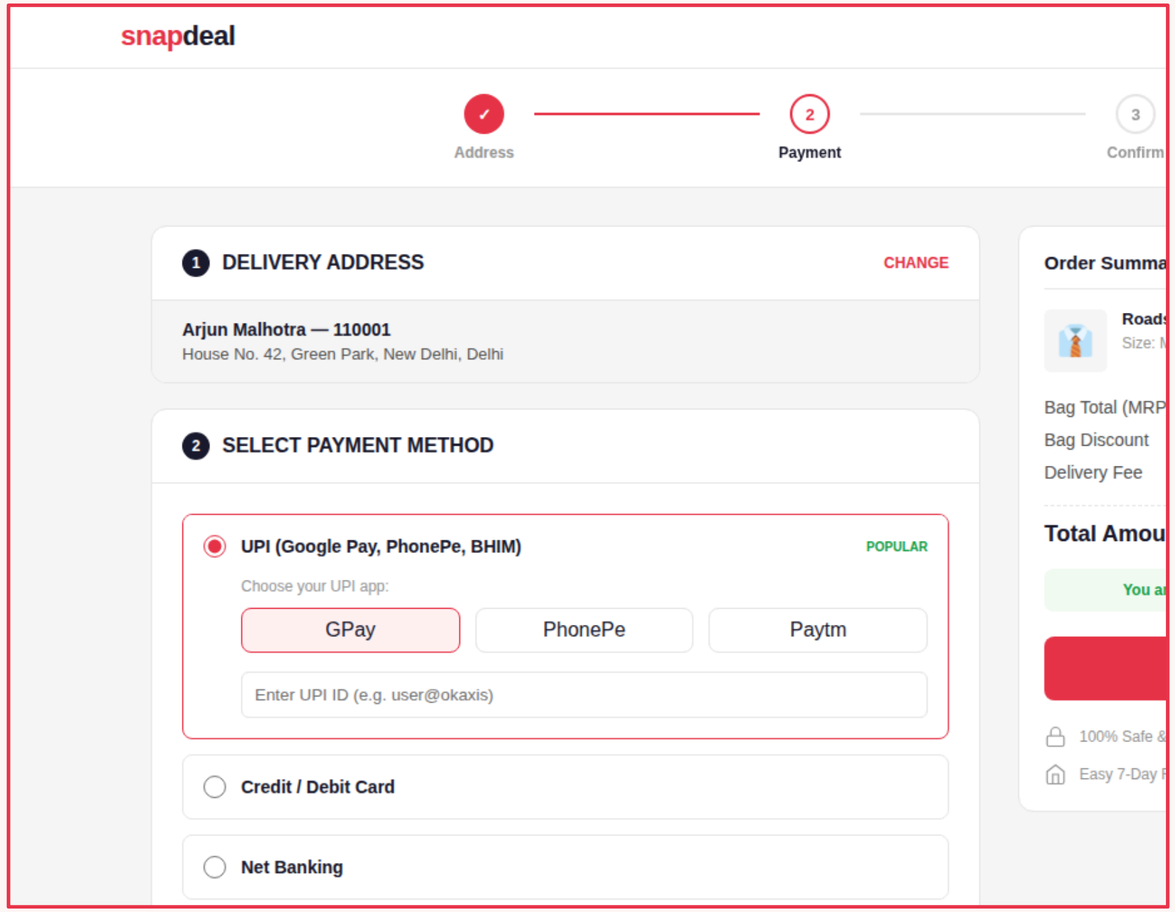
PROTOTYPE — CART & CHECKOUT FLOW

Cart Page



Item summary · Promo code · Order total

Checkout Page



Address · Payment · Order summary panel

BEFORE vs AFTER COMPARISON

Current Snapdeal		Revamped Design
Cluttered homepage, no hierarchy	→	Clean layout with clear visual flow
Inconsistent fonts, colors, spacing	→	Unified design system throughout
Basic search, no filter sidebar	→	Smart search + multi-filter panel
Confusing mega-menu navigation	→	Sticky navbar + icon category strip
Weak PDP, unclear CTAs	→	Trust-first PDP with bold CTAs
No mobile-optimised design	→	Fully responsive, thumb-friendly UI

Conclusion

This revamp addresses Snapdeal's core usability gaps by applying proven UX principles — visual hierarchy, consistency, and trust design. The redesigned prototypes demonstrate a modern, clean, and conversion-focused experience that can help Snapdeal better compete in India's hyper-competitive e-commerce market.

- 5 critical usability problems identified
- 6 UX-principle-backed improvements proposed
- 5 interactive HTML prototypes created
- Full user journey: Home → Search → PDP → Cart → Checkout
